

Q2 Sdk local setup :

https://docs.q2developer.com/setup/local/caliper_admin.html

1. Open ubuntu locally

Use the Q2-provided Caliper administration script :

1. `curl https://q2sdk-utilities.s3.amazonaws.com/caliper_admin -o caliper_admin`
2. `chmod +x caliper_admin`
3. `sudo mv caliper_admin /usr/local/bin`
4. `Caliper_admin`

In the above link there is video which will help us in setting up.

2. After setting up above, Open the below link to setup IDE and follow the steps.

https://docs.q2developer.com/setup/local/local_dev_ide.html

3. After the Above setup follow the below link to setup Extension

https://docs.q2developer.com/tutorials/custom_endpoint/create_extension.html#creating-the-extension
